**TITLE** International Exchange: Leaders for Tomorrow. A Review of U.S. Programs for Foreign Students.

**INSTITUTION** Bureau of Educational and Cultural Affairs (Dept. of State), Washington, D.C.

**PUB DATE** Sep 71

**NOTE** 60p.

**AVAILABLE FROM** Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402 (4400-1383, \$.45)

**EDRS PRICE** MF-\$0.65 HC-\$3.29

**DESCRIPTORS** \*College Students; \*Counseling Services; Federal Aid; Federal Government; Financial Support; Foreign Student Advisers; \*Foreign Students; Guidance Programs; Guidance Services; \*International Education; Orientation Materials; \*Student Exchange Programs; Student Placement

## ABSTRACT

Programs described in this booklet, the 1970 annual report of the State Department's Bureau of Educational and Cultural Affairs, are indicative of some of the services and opportunities for foreign students studying in the United States. Counseling services available to the foreign students and orientation procedures for incoming students are reviewed. A summary of exchanges and expenditures includes tables on: (1) exchanges with each country, 1949-70, (2) fields of specialization by category of grantee, (3) distribution of grantees in the United States, (4) countries which share costs of exchange, (5) total participants in the program, (6) women grantees as compared to total exchanges, (7) source of funds, fiscal years 1969 and 1970, (8) total funds obligated, fiscal years 1965-70, and (9) expenditures by country, fiscal year 1970. Special sections include reference to leaders abroad who have studied in the United States, 1970 State Department-sponsored programs for foreign students and young leaders, and a profile of the Exchange Program 1970. LEADERS FOR TOMORROW...  
A Review of U. S. Programs  
for Foreign Students

A REPORT OF  
THE BUREAU OF EDUCATIONAL  
AND CULTURAL AFFAIRS  
DEPARTMENT OF STATE — 1970

COLORADO CROSSROADS Seminar, held with State Department sponsorship, brings outstanding foreign students together for discussion of U.S. scene and problems. Here, from left, Mr. and Mrs. Sakr Sakr of Egypt, Isami Shiroma of Japan and Shun Au-Young of Taiwan pursue an animated discussion with panelist Christopher Griffiths (back turned).

# Leaders for Tomorrow...

A foreign student who finished his graduate work here only in 1961 is today Sweden's Minister of Education. Another who studied here in 1963 is today Singapore's Ambassador to the United Nations. Still another, a graduate student at MIT in 1961, is now directing a nuclear research center in Israel. Many others, advanced students here as little as 6 to 15 years ago, are now members of parliament; ministers of finance, health, agriculture or education; presidents or deans of universities; top level scientists or diplomats; heads of social welfare or economic development programs; leaders in many professional fields from law to dentistry.

No one can say with assurance what specific education or experience produces a leader—in this country or any other. But it's a certainty that more and more of tomorrow's leaders here and elsewhere will be drawn from those who study outside their own country, or have had some opportunity to observe other nations and peoples of the world.

To help build up a corps of such leaders is one of the privileges and responsibilities of the United States, among other countries. From 1954 to 1970 the number of foreign students in the United States rose from 34,000 to 135,000, and they now make up about 2% of all students in U.S. higher institutions. About half are graduate students. Other nations, particularly but not exclusively in the West, have experienced a similar demand from foreign students; indeed several countries in Europe have 10% to 17% of their student body drawn from abroad.

Wherever they study, foreign students represent a potential leadership group on their return home. The presence of foreign students on U.S. campuses, moreover, is recognized as a

means of enriching the education of American students and the research and teaching programs of U.S. institutions. The State Department has therefore encouraged and supported, in close cooperation with private organizations, a variety of efforts and special programs for foreign students to help assure them the best possible U.S. education and international experience. Some of these efforts have continued over a period of years, but beginning in 1970 they were stepped up, strengthened and enlarged.

Essentially these programs are directed to the major problems experienced both by the students themselves and the U.S. institutions which receive them: the student's need for counseling overseas on their choice of college here; the difficulty of judging credentials of students from abroad; the provision of adequate reception and orientation services for incoming students; the need to help the students understand the character of American society and the American people outside their campus.

Few of these programs can reach even the majority of students. To reach anything like the 135,000 or more now in the United States would require a far more intensive and widespread effort on the part of U.S. colleges and universities, local communities and private agencies as well as the State Department. The programs described in the following pages, in this 1970 annual report of the Department's Bureau of Educational and Cultural Affairs, are at best, then, only indicative of some of the services and opportunities awaiting the foreign students here. They are also indicative of the challenge posed to the American people in any endeavor to reach, help and encourage far more of these students from whom, we know with certainty, will rise many of the leaders of tomorrow's world.

AT COUNSELING OFFICE in Nairobi, IIE representative advises two young graduates on possibilities of taking advanced studies in the U.S.

## STUDENT COUNSELING ABROAD

Choosing the right U.S. college or university is the first great hurdle of the foreign student. As more and more of them aspire to U.S. education, graduate or undergraduate, matching the student and institution has become a serious business.

American parents who have seen sons and daughters go through the anguish of choosing a college can well imagine the problems which face a student far from the United States in making the same decision. He must make not only an immense financial but an important psychological investment in study abroad.

He probably knows the names of only a few world-renowned U.S. institutions. Few U.S. alumni are at hand to question. To whom can he turn for advice?

One major source, now provided by private agencies as well as the State Department, is counseling offered by specialists centrally located in key regions of the world, especially in developing countries. Since students with U.S. Government support are graduates chosen only after a special counseling, selection and placement process, these specialists concentrate their efforts on the so-called "non-sponsored" students—those without U.S. support. This is the vast majority. Only about 1 in 20 of all foreign students here come with U.S. financial assistance.

The State Department in 1970 increased its expenditures for all overseas counseling to \$131,000 and planned further increases for subsequent years. The Department provides counseling services in two ways. The first is to supplement the counseling efforts of private agencies already engaged in such work. One such agency is the Institute of International Education (IIE). Since 1962, it has received over \$1½ million from private sources for overseas counseling work. For the last 7 years, the State Department has supplemented IIE's funds for this purpose. The Department's contribution in 1970 supported IIE's counseling services in Peru (which also services all of South America except Brazil), and in Hong Kong which services the area from Japan to Thailand. The IIE itself supports an office in Nairobi which services at least six other African countries by means of part-time local assistants.

The flow of students to IIE's counseling centers, as elsewhere, is large and evergrowing. Its overseas offices in 1969-70 advised nearly 70,000 students. In one busy month not long

go the IIE's Hong Kong office, which counsels the largest number (nearly 47,000 in the 1969-70 academic year alone), reported that its front door literally fell off its hinges twice, from the press of students coming and going.

Other private agencies are also heavily engaged in overseas counseling on their own. In cooperation with the State Department, the American Friends of the Middle East acts as student counselor in Tehran, Beirut and Cairo and may expand its work into other Moslem countries in North Africa as well as the Middle East.

Another agency, the African-American Institute, has six major offices in Africa with "program representatives" in other key African cities. This organization receives substantial support from the U.S. Agency for International Development for screening participant trainees for U.S. study, but it also screens students for specific scholarship programs, some of which are supported by State Department grants.

The second way the State Department helps provide student counseling is through support of the services offered by many of the overseas Binational Commissions—agencies which have had long experience in administering the educational exchange ("Fulbright") program. The Department also provides training for counselors employed by the Commissions as well as for those who do similar work for private agencies. Basic information provided to students by the Binational Commissions includes college catalogues and the excellent booklets prepared by the College Entrance Examination Board, in cooperation with the State Department, especially for this purpose.\*

In countries where Binational Commissions do not exist or are not active in counseling non-grant students, the Cultural Affairs Officers or special education officers at the U.S. Embassies serve as counselors, among their many other duties, and try to make sure that U.S. Information Service libraries abroad contain adequate orientation materials and college catalogues.

\* "Financial Planning for Study in the U.S." and "Entering Higher Education in the U.S."

Only a fraction of the aspiring students can actually qualify for a U.S. institution or afford the cost. Counseling therefore concerns itself as much with making a determination of the student's level of training, his English language proficiency, financial resources, or the availability of scholarships. Another function of counseling is to acquaint the would-be applicants with the opportunities for training closer at hand. For example, some African students may not know that the very training facilities they seek in the United States exist in a nearby African country. Others are urged to take further training at home before applying in the United States. All counseling services emphasize the exacting requirements of most U.S. institutions and encourage only the best and most qualified candidates.

#### WHO SHALL BE ACCEPTED?

When a foreign student finally sends in his application to a U.S. college or university, how can it judge his credentials—especially when he comes from a school abroad with a curriculum quite unlike our own?

With foreign students now applying to U.S. institutions from some 170 countries and territories—many of which have educational systems not only unfamiliar but undergoing rapid changes—the problem is acute. A large U.S. university may receive as many as 8–9,000 applications in a year from abroad when it can accommodate only 400. Accepting a student unqualified by U.S. standards (or rejecting one fully capable of handling the work) can mean serious personal loss and failure.

To help solve this problem, several private agencies with long expertise in this field meet together as a national liaison group on foreign student admissions, with the encouragement and active support of the State Department. Among them are the American Association of Collegiate Registrars and Admissions Officers, the National Association for Foreign Student Affairs (NAFSA), the Council of Graduate Schools, the Institute of International Education, and the College Entrance Examination Board.

The Collegiate Registrars group, for example, convenes these agencies, usually semiannually, in a special Council on Evaluation of Foreign Student Credentials, to review and approve guides on the education systems of particular countries. Since 1963 the State Department has supported the publication and distribution of 28 such booklets in a World Education Series, plus a “do-it-yourself” instruction booklet on evaluation of foreign

student credentials, all prepared by the Registrars group. These booklets are made available to U.S. colleges and universities. NAFSA, under its State Department-supported “Field Service” program and in cooperation with the Collegiate Registrars, also publishes a guide to admission of foreign students which goes to all colleges and universities.

To supplement these efforts and keep information up to date, the State Department also supports continuing programs of NAFSA and other agencies to hold workshops in key regions of the world to evaluate educational systems and credentials. In recent years, such conferences have been held for Latin America, the Pacific-Asia area and South and Southeast Asia. Published reports from these workshops are made available to U.S. institutions.

The overseas student counseling agencies also keep closely in touch with local education institutions and educational officials by field trips in their general area. Their reports on educational changes and reforms, shared with other U.S. private agencies and institutions, provide essential material for U.S. colleges to evaluate applications.

Even with all this help, it is sometimes necessary for a U.S. institution to consult as many as seven sources to be sure of the student's aptitude and readiness for study in the United States. The smaller U.S. colleges consequently often have the greatest problems in evaluating foreign student credentials. Large universities usually have full-time staff working on foreign admissions and accumulate an expertise small colleges cannot. One solution currently being tried for small colleges is a pooling of resources. The Regional Council for International Education, centered in Pittsburgh and composed of 32 colleges in the region, is an example. With the assistance of a small grant from the State Department through NAFSA, the Council in 1970 offered its

**SIGNING UP.** Incoming foreign students register for orientation classes and English language refresher courses. Well over 135,000 foreign students are

now here, about 2% of all students enrolled in U.S. higher institutions. U.S. Government assistance goes only to small fraction, almost all graduates.

members a general admissions service, a credentials evaluation service, and even placement assistance. Further, under the joint sponsorship of the American Association of Collegiate Registrars and other educational groups concerned with admissions, a Mid-West Evaluation Project was formed in 1967. This project makes available to its group of small colleges the free consultant services of nearby specialists from larger universities who review applications and credentials from countries with which they are familiar.

Overseas student counseling offices may also assist with some admission problems. On request from U.S. universities, they may act as interviewing points for students in whose application the university is interested but where further information is needed along with an appraisal by personal interview. On occasion they may even arrange for administering of the College Entrance Boards and Educational Testing Service examinations, and direct placement of qualified students, particularly on behalf of smaller colleges. The counseling offices also sometimes administer the standard Test of English as a Foreign Language ("TOEFL"), a stiff exam now accepted world-wide as a basic measure of English proficiency, and today required by nearly all U.S. colleges and institutions of foreign applicants.

Clearly then the whole process of admitting foreign students to U.S. institutions has become far more professional, with growing literature and expertise, and a widening range of skilled services to draw upon. The net result should be, and is, a more careful selection of students, and a far greater chance for the foreign student to get the educational experience in the United States most suited to his qualifications and his needs. Since satisfaction with his progress toward personal goals is probably the single most important element in a student's overall reaction to his U.S. experience, the State Department stepped up funds for work on admissions services by over a third in 1970, and planned further substantial increases for subsequent years.

## ARRIVING IN THE UNITED STATES

Today most students arrive by air, only a few by sea. For a hectic moment each suffers the confusion and apprehension common to all travelers set down suddenly in a strange land. Then his eye catches a welcome sight—an armband reading "Foreign Student Advisor". Above it is a sympathetically inquiring face coming forward to ask, "Are you Mr. J. D. Varma (or Mikashi or Aduba)?" The welcoming face is that of a member of the International Student Service, a volunteer organization formed precisely to give special services to foreign students. Meeting them on arrival is one of the most appreciated.

After years of familiarity with immigration procedures, and of practice in easing the first moments of cultural shock, the Service's volunteers smooth the way for the new arrival. They check on his tickets for the next and final leg of his trip to the university which has accepted him, and if necessary arrange an overnight stay before he moves on, help him collect his baggage, change his money, find a taxi. These small services are performed with skill—and imbue the tense awe-filled moment of arrival with a touch of personal warmth. He has arrived in the United States a stranger, but he is no longer alone.

The State Department has felt this initial point of contact with America so important that for the last 6 years it has provided supplementary support to enable the International Student Service to meet non-sponsored as well as Government-assisted students. When foreign students first apply for their visa to enter the United States, a form is made available by the Service in all consular offices abroad, asking that each student advise the Service of his arrival time and place. In 1970 the Service met over 15,000 such students at all major ports of entry to the United States. The State Department planned some additional support to this valuable service for 1971.

## ORIENTATION TO THE AMERICAN SCENE

"Does this hotel have a laundry service? My clothes need cleaning and pressing."

"Yes, but it is expensive. It is usually cheaper to take them to a cleaner's."

"That's fine, but how long will it take?"

"Sometimes they can finish the work in one day."

"Thank you. I will go there now."

The class of 10 is speaking in unison, with a variety of accents. The instructor then calls on pairs of students, one to voice the questions, the other the answers. A Thai girl begins the drill, asking her Pakistani classmate, "Does this hotel . . . ?"

The scene is a class of newly arrived foreign students whose English fluency has been found to be only at the intermediate level, and who are taking a 3-week intensive course in English at Georgetown University in Washington before beginning the graduate study for which they came. An hour of such drill in class, then up to the language lab, with its separate booths, earphones and play-back tapes, and one hears spoken patiently over and over, "Does this hotel . . . ? . . . Thank you. I will go there now." Then back to class for practice in English composition and reading.

Similar intensive English training is given in 21 orientation centers throughout the United States to which foreign students, who come either on State Department grants or under private

sponsorship, are sent, with State Department assistance, in limited numbers, for special orientation before facing the hard task of doing advance study in an unfamiliar country, campus and language. A list of these centers is given in the appendix.

The State Department has helped to support this kind of orientation for 21 years, through a program administered by the Institute of International Education. The Agency for International Development provides similar orientation for its participant trainees from abroad. The Department's concern is the non-sponsored student, as well as those selected for Government grants who have already had some orientation in their home countries.

Orientation courses include not only language training but an introduction to the United States, its history, customs, people and its economic and social setting, and specifically to our university system and teaching methods. All courses include some special information on how to use a U.S. library and reference materials.

State Department-supported courses are able to reach only a relatively few students—about 600 to 700 a year. Although the Department increased its support in 1970 for non-sponsored students and planned a 40% increase for the following year, there will still not be adequate funding to reach directly more than a small proportion of incoming students. However, it is reasonable to expect that, as in the past, the Department's courses will serve as models for others, and stimulate other sponsors to provide increased and better services of this kind.

EXTRA CURRICULAR seminars offer outstanding foreign students chance to discuss the American scene, and exchange views. Here "delegates" of the American Field Service explore questions of leadership.

In the opinion of many faculty, a good orientation course can put an entering foreign student at a stage of English comprehension and academic development which students without this training may achieve by the end of the first semester at the earliest. Many colleges and universities, therefore, now offer regular courses (often for credit) at least in intensive teaching of English, and often, along with these, some general orientation to the United States. A recent survey by the Institute of International Education showed a jump of 70% in the number of academic courses in

English for foreign students, compared to the previous 5 years. As many as 300 U.S. institutions now provide English courses for a full academic year, and 114 provide summer courses. Foreign students are urged to take these courses along with their regular studies. Moreover, many institutions are finding today's arriving foreign student better prepared in English than his compatriot of 10 years ago. In large part this is due to the insistence today of U.S. colleges and universities themselves on a good English test score before accepting an applicant.

**PRACTICING ENGLISH.** Georgetown University's American Language Institute provides language laboratory for incoming students requiring intensive short-term English drill.

A few universities provide special courses or seminars on particular fields of study. At the University of Texas (Austin), for example, which conducts one of the orientation programs supported by the State Department, the class of 50 was divided into three groups, according to each student's intended field of study, for professional seminars in the humanities, the social sciences, and science and engineering. Other universities, on their own, offer orientation for foreign students in specific fields. The University of Colorado provides an introductory course in economics, including agricultural economics, under the direction of the American Economics Association. An orientation program in American law was given in 1970, as in the previous several years, as an introduction to the American judicial process and constitutional law. Stanford University gives special orientation for foreign graduate engineers and scientists. Intensive study of English, particularly of the special vocabulary of each subject, is required throughout these courses.

Another new trend, very much in keeping with the times, is to use more students—both foreign and American—to help both in the planning and orientation of new foreign students. The University of Washington's unique program planned by fellow students has included informal "rap" sessions outside classroom confines (one site was a wilderness camp). Elsewhere, councils of foreign students who have been in the United States for a time are asked to plan the orientation for newly arriving students, or act as academic helpers to 10-12 newcomers in their own fields of study.

A few incoming students, especially undergraduates from the developing countries, may be offered, under private auspices, still another kind of orientation: a 4- to 6-week home stay with an American family the summer before they enter college. About 100 were given this opportunity in 1970 by the Experiment in International Living, a privately supported agency which exchanges both U.S. and foreign teen-agers.

As these examples suggest, the magnitude of the need for orientation services, and the variety of efforts being made to meet that need, are both impressive. What is still required is greater effort on the part of all concerned to close the gap.

### ADVISING FOREIGN STUDENTS ON CAMPUS

When after World War II, the world's young people began to come to U.S. universities in ever larger numbers, a new role emerged on U.S. campuses—that of foreign student advisor. This advisor does not replace the academic counselor; rather, his job is to help foreign students with their special needs—and these are many and varied. He arranges for orientation classes and for special English language training; he advises on immigration, housing, the student's rights or privileges under U.S. laws; he discusses their problems of adjustment to U.S. campus life and, where necessary, arranges for psychiatric counseling; he advises on financial problems, including arrangements for work permits for needy students and often for a foreign student credit union for short-

term loans; and, last but not least, he works closely with the local community and hosts.

On campuses with large numbers of foreign students, the advisor's work is full time and he is a full-time member. On smaller colleges with few foreign students, he is a part-time member serving only part time. He works closely with the admissions office, and handles all matters relating to foreign student affairs, special

As early as 1948, the advisors began to form themselves into a country-wide association to deal with common problems. All major U.S. universities have such an association. The association, the National Association of Foreign Student Advisors,

orientation and other special programs. The National Association of Foreign Student Affairs "field service" gives guidance

## ON CAMPUS

the world's young people began in larger numbers, a new role for the foreign student advisor. This is a social counselor; rather, his job is to meet special needs—and these are orientation classes and for special needs—advises on immigration, housing, and under U.S. laws; he discusses U.S. campus life and, where needed, counseling; he advises on financial aid for work permits for needy students and credit union for short-

term loans; and, last but not least, he puts the students in touch with the local community and host families.

On campuses with large numbers of foreign students, the advisor's work is full time and he may have staff assistants. In smaller colleges with few foreign students, he may be a faculty member serving only part time. He usually maintains close liaison with the admissions office, and has full responsibility for handling foreign student affairs, special services and programs.

As early as 1948, the advisors were already numerous enough to form themselves into a country-wide association to work on common problems. All major U.S. institutions now are members. The association, the National Association for Foreign Student

GETTING INVOLVED in the local community, via home hospitality and sharing in civic projects and programs—including social work—is stressed now in all foreign student activities.  
—PHOTO FROM NEW HAVEN REGISTER

Affairs (NAFSA), serves as a focal point for continuing study and consultation with all agencies, including the U.S. Government, concerned with the problems and prospects of the foreign student in the United States.

In 1963 with encouragement—and a substantial grant—from the State Department, the Association began a Field Service program which, at no charge, assists all colleges and universities in strengthening their programs for foreign students. There are now over 1,700 institutions in the United States which have foreign students and virtually all of them are now reached by the Field Service. Through this Service, for example, the Association gives requesting institutions guidance on English language programs for foreign students, on admissions problems and practices, and offers foreign student advisors free consultations with experienced professionals, if the colleges request it. It also gives short “drive-in” training courses and workshops to enable new advisors to consult with their more experienced counterparts from larger institutions.

Advising foreign students is now a sizable business. Twenty-seven institutions have over 1,000 foreign students, 7 have more than 2,000, and 82 have over 400. It has also grown over these post-World War II years into a far more professional and sophisticated business, as the United States itself has become more informed about foreign peoples, problems and cultures, and more aware of the need not to “Americanize” the foreign student here but to prepare him best to serve his own country and its culture—in short, to help him prepare for leadership.

## THE FOREIGN STUDENT AND THE COMMUNITY

American families and communities have been meeting with foreign students for years. But the style has changed. The old way: invite a foreign student for Sunday dinner. The new way: invite him (or her) to visit a hospital or a welfare center, to speak to a social studies class, to participate in an informal "rap" session with local business, civic, cultural or political leaders, or to join in a civic anti-pollution drive. Not that Sunday dinner by local hospitality groups and families is neglected, but the "let's be kind to foreigners" tone is gone, or certainly going, and something more real, more mutually revealing about our own and the student's culture is taking its place.

This new trend is apparent among the literally hundreds of community service groups, comprising tens of thousands of citizens, which have been formed in and around university campuses and in major cities in response to the needs of foreign visitors, including students. About 80 of the groups in larger cities belong to COSERV (The National Council for Community Services to International Visitors), which was formed in 1961 with department assistance to increase cooperation, exchange of information and pooling of experience among them.

The NAFSA Field Service, supported by the State Department, offers guidance and consultation to community groups which wish to set up programs and services linking foreign students—and their wives if present—with the local community and American families. There are now over 1,000 key volunteer organizers who are reached by the Field Service, and who work in cooperation with the local foreign student advisors.

Services provided by these groups cover a wide range. Some develop ties with an incoming student even before he arrives. From foreign student advisors they get the name of an incoming student and write him before he leaves home to assure him of a

personal welcome and tell him of services available, sometimes even designating a "host family" for him.

After the student arrives, services offered may include a "loan closet" of warm clothes for students from tropical climates (loan of a winter coat, \$1), and of housekeeping items (pots, pans, dishes) until students are ready to buy their own; help in finding a place to live, shopping help and English conversation "coffee hours" for wives; offers of weekend home stays or trips to places of interest. In a few cities community groups have also organized, in consultation with the foreign student advisor, a legal service (usually with at least the first consultation free), and special income tax assistance.

Valuable as such personal and community services are, there is a growing number of efforts, encouraged by the Department, to enable the student to participate in the community as well as share in its pleasures and conveniences. Thus, foreign students of the University of Chicago are joining in an effort to encourage high school dropouts to go back to school, through group discussions at local job-seeking centers. In many communities, the students are invited to teach the history and culture of their country in local schools; others are working in community welfare and recreation centers in ghetto areas; still others, on a regular basis, are visiting old people in nursing homes or fellow foreign students in hospitals.

So far, these efforts are few and scattered. But the trend is clear. Community service groups, like foreign student advisors, are aware today that the basic "service" they can render is not simply doing something *for* foreign students as much as to do something *with* them and share with him our mutual problems and aspirations. Out of such efforts come the richness and depth of individual experience which can favorably affect perceptions, perspectives and patterns of communication among the leaders of the future.

SECRETARY OF STATE William Rogers at a reception for foreign students held annually in the State Department, sponsored by the local Foreign Student Service Council.

### ENLARGING THE STUDENTS' HORIZON

Providing opportunities for the foreign student to supplement his studies and casual observations with informed face-to-face discussion embracing a variety of viewpoints on some of the current aspects of the United States scene is becoming a special interest of all groups dealing with foreign students, including the State Department.

While the foreign student, pressed for time in the tough job of making a success of his studies, doesn't have many spare hours, there is a risk that he may return home knowing a lot about his specialty—but very little of the United States and the larger social, economic and political issues that may be of potentially great importance to him, as a professional and as a leader.

As a result several private groups have in recent years arranged special regional seminars and workshops for selected students, usually at or near the end of the students' stay. One of the oldest is the Williamsburg International Assembly. For the past 14 years in that historic town in Virginia, it has held 3- to 4-day seminars conducted with the help of outstanding men and women in U.S. affairs, in which selected foreign students (50-60 at a time) can participate in a series of talks and frank discussion on the current U.S. scene, on every topic from racial tensions and foreign investment to federalism or Viet-Nam. The State Department in 1970, as for the past several years, gave supplemental support for this seminar, and for four to five similar, if smaller, seminars held at Aspen, Cornell, Colorado Springs and Los Angeles.

In 1970 the State Department markedly stepped up its interest in stimulating more "enrichment" seminars during the school year for a larger number of non-sponsored students—the total reached so far is distressingly small—and provided "seed money" to do so. In cooperation with the National Association for Foreign Student Affairs, it sponsored on an experimental basis the following extracurricular activities: in Ithaca, New York, Boston, Pittsburgh and Akron, a series of special seminars to enable foreign students interested in going into business and industry to meet with local businessmen, and examine the role of U.S. business in national and international development; at the University of Texas, a course on business development and communication in Latin America for students from that area; in Pittsburgh, a leadership seminar. In over a half-dozen other college and university centers in Pennsylvania, West Virginia and Ohio, workshops on intercultural communications were arranged, with State Department funds, through the Regional Council for International Education which has 32 member institutions in the area. These efforts are being continued through 1971, with some increased Department funds, incorporating adaptations and changes born of the first year's experience.

Over vacation periods foreign students are urged to travel within the United States to get more than a campus-bound perspective. They are given a special opportunity to do so through a volunteer plan called VISIT, a privately supported program of the International Student Service. VISIT not only offers travel advice but sets up a series of host families where the student may stay without charge en route. Foreign student advisors actively encourage students to use this service or other means to see as much of the United States as possible. Such travel is also encouraged by special reduced rates offered to foreign academic exchangees by U.S. bus companies. The National Association of Motor Bus Owners, moreover, at the request of the State Department, for the last several years has eliminated its earlier requirement that the special "See America" tour tickets be purchased before these visitors enter the United States.

INDUSTRY VISITS for foreign students are encouraged. Here General Electric in Syracuse shows a group its visual products division.

## PROGRAM

1) Conducting 10 groups of African students on U.S. educational-travel visits; 2) supplementary services to some 250 African refugee students in U.S. universities; and 3) counseling of African students in the Washington, D.C., area.

Continuing publications of the World Education Series on foreign educational systems.

Teen-age exchange for foreign high school students.

Counseling and arranging grants in U.S. institutions for students from certain Near Eastern countries.

6-week work-study training course for some 180 foreign young social workers and youth leaders in five U.S. cities and their community service agencies.

Conducting travel-observation visits in the U.S. with student leaders from East Asia.

Continued and increased services to foreign students studying in or visiting Washington, D.C.

1) Providing refresher English language training for incoming foreign students (and other State Department grantees); and 2) developing and publishing English proficiency tests for non-sponsored foreign students applying for admission to U.S. colleges and universities.

\* The years noted indicate the period over which these agencies have received State Department assistance for carrying out programs for foreign students.

\*\* These agencies conduct other programs under contract with the Department and independently. The above listing refers only to programs for foreign students and youth which received State Department support in 1970.

In the nation's capital, which most foreign students usually try to see during their U.S. stay, the State Department has for the past 7 years helped to support the work of the volunteer Foreign Student Service Council in receiving such visitors (in addition to its year-round services for the nearly 6,000 foreign students in the Washington area). For groups of visiting students, the Council arranges not only for sight-seeing and home stays with Washington families, but for interviews with Congressional leaders and visits to the open hearings of Senate and House sessions, and for seminars on the U.S. Government with high-level Washington

speakers. An array of activities is offered in the State Department, including tours of the Washington special services seminars and special

in the State Department. For African students living in or visiting  
the Washington area, the African-American Institute also offers  
special services, in addition to joining with the Council for sem-  
inars and special events.

In a time of rapid change in campus patterns and attitudes,  
it is especially important that these programs which engage the  
foreign student actively in the broader life of our society be  
strengthened and multiplied.

## EDUCATIONAL TRAVEL GROUPS

Obviously the students who come to the United States represent only a tiny fraction of their age group at home. Among this vast majority at home are many who are leaders in student affairs or who have already begun their professional careers. For selected groups of such young people, the State Department provides short-term "educational travel" or study-observation visits to the United States. In 1970 some 300 such young leaders and professionals came on these visits; since 1949 about 8,000. Because many of the young people chosen are already at work in their careers, groups are usually drawn from a single profession—journalism, labor, law, urban planning and architecture, government and politics, or the arts. Other groups include only elected student leaders.

To assure these educational travel groups complete freedom to see the United States and meet all kinds of Americans, the State Department usually contracts with a private agency (or university) to arrange their travel and program in accordance with the group's special interest. For example, a 1970 visit of young student leaders from East Asia was handled by the Experiment in International Living. This agency, which has long experience in exchanges of young people, arranged, as the young Asians requested, for meetings with U.S. student leaders of all shades of political opinion—representatives of the extreme left, black nationalists, and editors of the student underground newspapers, as well as Democrats, Republicans, labor leaders and state and city officials.

Similarly, a group of young West African leaders visiting in 1970 asked to see as many kinds of U.S. minorities as possible. Their tour included a visit with young black leaders and Chicanos (Los Angeles), Mormons (Salt Lake City), Creoles (New Orleans), Papagos Indians (Tucson), Black Panthers (New York), a women's lib group (Boston). For balance, they also met with stock brokers in New York, city planners in Philadelphia, and agricultural experts in Missouri. As with many African youth groups, their tour was arranged by the African-American Institute, under State Department contract.

A more formal kind of short-term visit was arranged, with State Department funding, by the University of California at Los Angeles in 1970 for a group of select Brazilian students. Their tour included a 4-week series of lecture-seminars on the United States to precede their travel elsewhere. While attending the seminars, the young Brazilians stayed in a UCLA dormitory with American students, visited the law courts and law libraries and the Los Angeles Symphony, as well as the jet propulsion laboratory in Pasadena; talked with labor officials, Berkeley student leaders, a labor action group in Watts. In Washington the group attended Senate hearings, met with Senators and Congressmen of both parties, a member of the Supreme Court, the Peace Corps, in addition to making the usual tourist rounds. The program, which was the ninth in a series administered by UCLA under State Department sponsorship, also featured a visit to Puerto Rico to show what a Latin-oriented country can achieve in self-development.

Other educational travel groups of special interest in 1970 included a three-member NATO-study group from the Norwegian Conservative Students' Association, who sought answers to questions on the desirability of Norway having foreign alliances; young specialists in English-teaching from Spain, and a similar group from French-speaking countries of Africa.

Leading young professionals are also brought to the United States for specific short-term training, again through the help of private agencies working with supplemental financing from the

educational travel groups of special interest in 1970 member NATO-study group from the Norwegian Students' Association, who sought answers to questions of Norway having foreign alliances; in English-teaching from Spain, and a similar group from French-speaking countries of Africa.

Young professionals are also brought to the United States for short-term training, again through the help of the State Department working with supplemental financing from the

State Department. For example, in 1970, as for the last several years, the International Legal Center brought 13 African graduate law students to the United States for a research and teaching seminar. The National 4-H Club Foundation invited 41 young foreign farm leaders, representing 15 countries in the Near and Far East and Africa to the United States to live and work with American farm families. (An equal number of U.S. farm youth was sent abroad to the same areas.) 1970 was the 10th year in which the State Department gave supplementary support to international 4-H exchanges.

In terms of State Department support the largest single program for bringing young professionals to the United States, and an outstanding one as well, is the Council of International Programs for Youth Leaders and Social Workers. A private program, it has had continuing administrative and other support from the Department for 15 years. Three-fourths of the Council's total resources, however, derive from private U.S. donations, foreign private agencies or foreign governments. As is so often the case, the Council was the creation of a single extraordinarily com-

FULTON FISH MARKET is scene of pre-dawn visit of an educational travel group of State Department sponsored student leaders, studying problems of U.S. urban and rural life.

litted and capable private citizen. Now organized under distinguished private sponsorship, in cooperation with social work agencies, schools and civic groups in five cities in the North East and North Central United States, the Council in 1970 provided some 180 foreign young professionals with 4 to 18 months of intensive and extensive study and practical training, together with

their American counterparts, in local, regional and national-level social work and welfare programs.

Over 2,000 young professionals have participated during the last 15 years. Many of them have gone on to important jobs in their home countries. Some have helped introduce new social work programs such as "head start" in Germany, a children's village in India. In short they have done just what was hoped—become leaders in their own countries in their professional fields, and set up enduring ties of understanding and communication with their professional colleagues in the United States.

#### **Exchange of High School Students**

One other important group of young people abroad who now have a chance to be selected to visit the United States are outstanding high school students. A half-dozen private U.S. exchange programs—of which four in 1970 received some supplementary support from the State Department—today are engaged in bringing exceptionally gifted foreign high school students here from all over the world for short-term study. More than 71 countries were represented in the 4,600 young people brought here by the four private agencies in 1970. The young visitors live with American host families for a year, go to the local high school and join in community, school and family activities.

The Department's funds are merely supplemental to the substantial financing raised by these organizations on their own,

contributing less than 1.5% of the total costs of the teen-age exchanges. One of the sizable sources of private contributions to the program comes from the host families, who assume all the board and room costs of the visiting student. (The family's only recompense is an income-tax allowance for expenses.) It is the result of contributions like these that, in the past 14 years through 1970, 46,350 outstanding foreign high school students have had an experience which brings many of them to feel that they have a second home in America.

Just as youth is changing all over the world, the private agencies arranging teen-age visits are also making changes in their programs and are contemplating others. Recognizing the earlier immaturity of young people today, the agencies are now discussing making the accepted age level 15-19 instead of 16-18. They have already experimented with interspersing home stays with periods of community and social service work, particularly with disadvantaged groups in the United States—American Indians, for example. Another variation on the home stay is periodic participation in intercultural and leadership seminars and conferences with their young American counterparts. Opportunities to permit the young visitors to attend a junior college instead of—or in addition to—U.S. high schools are also under consideration.

These, then, are some of the private programs assisted by the Department of State to assure that at least a significant proportion of all foreign students coming here receive, directly or indirectly, an enriched education, as well as a rounded experience of the United States, of its people, problems and civilization.

The programs are of particular importance—and concern

—today. U.S. colleges and universities everywhere are under financial pressure and forced into hard decisions on how to fund special studies and scholarships for U.S. minority groups, plus curricula more relevant to today's needs, while continuing to provide acutely needed special services for foreign students. These same decisions have been faced by foundations and other private agencies which have been so effective in their past support of exchange programs. It is highly regrettable that a few institutions have already cut down on these services, and the current trend is not encouraging.

At the same time, all who work with and for students from abroad realize that they are an inestimable resource—no less to the United States than to their own countries. Foreign students on U.S. campuses include, as a recent University of California survey observes, some of "the best brains of the world." Already many of those who have studied here—as high school students, undergraduates, graduates, or as young professionals on short visits—have become leaders on their return home. The names listed on earlier pages indicate but a few of the very large number now playing important parts in their home countries.

Many others will do so in the future. But whatever their position of leadership, their years of study abroad make them members of the new international fraternity, the transnational "community of the concerned" which knows no boundaries. It is this group in each country which is most likely to develop new forms of international cooperation, and to work consciously among themselves and other nations, including the United States, to solve some of mankind's common problems. To the extent that we as American individuals, communities, institutions or public or private agencies, help them build ties with U.S. classmates, friends and professional colleagues, we contribute toward this long-sought international partnership for peace.

**TEEN-AGE EXCHANGE.** Outstanding high school students —left: from Norway, Yugoslavia and France—are brought to the U.S. to live in local communities while attending school.

## INDIVIDUAL ARTISTS (1)

Betty Allen (Soprano) .....	Latin America
-----------------------------	---------------

## ACADEMIC GROUPS

Millikin University Jazz  
University of Illinois Jazz  
University of California Jazz

## ATHLETIC TEAMS (4)

National Association of Intercollegiate Athletics Basketball  
World University Winter  
United States Collegiate  
Basketball Team

## LIST OF COLLEGES AND UNIVERSITIES PROVIDING ORIENTATION FOR SPONSORED AND NON-SPONSORED STUDENTS (with U.S. State Department Assistance)

American Language Institute, Georgetown University  
Boston Area Seminar for International Studies (BASIS)  
Dickinson University  
Economics Institute, University of Colorado  
Indiana University  
Iowa State University  
North Carolina State University  
Oregon State University  
Orientation Program in American Law, Brown University  
Rockhurst College  
St. Louis University (2 programs, one for non-sponsored students,  
one for medical doctors in U.S. for advanced training)

Stanford University  
State University of New York  
University of Arizona (2 programs)  
and another for non-sponsored students  
University of California, Santa Barbara  
University of Hawaii  
University of Kansas  
University of Michigan  
University of Minnesota (2 programs)  
and another for non-sponsored students  
University of Texas  
Utah State University
